

Restek PLOT Columns

Porous layer open tubular (PLOT) columns are very beneficial for solving application problems, especially for the analysis of volatile compounds. PLOT columns have a unique selectivity, allowing for the separation of gaseous compounds at room temperature. Due to the adsorption mechanism of the supports used in PLOT columns, permanent gases and light hydrocarbons can be resolved at room temperature; columns can then be programmed to higher temperatures to elute higher boiling compounds.

Listed below is our entire range of PLOT columns. If you are unsure of which column is best for you, please fill out our form at www.thamesrestek.co.uk/which-column and we will get back to you with our recommendation.
